

## DEFENSIVE DRIVING

SB 004 2016

Recent Road Traffic Accidents showed us even skilled and professional drivers can be involved in Road Traffic Accidents. Accidents happen in just a split second.

The following underlying hazards were or are suspected to be the cause of the recent Road Traffic Accidents;

- **Fatigue;** having negative effect on the response time.
- **Distance;** not keeping sufficient distance.
- **Weather conditions;** not enough consideration for conditions like slippery roads and limited view.
- **Traffic;** Not anticipating enough to others in traffic, too late to respond to avoid collision and unaware of others in blind spot.
- **Distraction;** By devices like smart phones, navigation systems or other examples such as reading documents.

Use your Experience and Professional Skills and give full attention to:

**CONCENTRATION - OBSERVATION - ANTICIPATION**
